Specifications:

Fork attachments are designed to match greenhouse bay and aisle widths.

- * **Fixed forks** can be used to transport **pots, flats, and shuttle trays**
- * **Spacing forks** are used to automatically space pots ranging from 3 ½" - 15 ¾"
- * Designed for **standard fork trucks**
- * Systems available for concrete, gravel, and compacted weed barrier covered growing beds

Studies have shown that up to 40% of a grower's labor hours are used to space and move plants in and out of the greenhouse. Fixed and spacing fork attachments, in combination with production and shipping buffer belt systems, can dramatically reduce a grower's total labor hours used in material handling. Hundreds of plants are moved at a time with one person instead of double handling with cart loading and unloading crews. Spacing can be scheduled when it is best for plants, not based on the availability of labor.
